02 · Controls → Industry Incidents

Which SHIELD-AI controls are actually **evidenced by real incidents**? This view links every control to the specific catalogue incidents (INC-01…INC-92) that reference it in their coverage verdicts. The most-evidenced controls are the highest-priority hardening targets — they are the controls the real world has repeatedly shown we need.

Not yet directly evidenced by an incident (4 controls)

These controls are part of the framework’s baseline but have not yet been the direct subject of a catalogue incident. They are required coverage, not optional — the absence of a documented incident is a coverage gap to close, not a control to drop.
